

Southern

New England

June 2018

Celebrate! Our citizen-science network is 20 years active. What started as the Colorado Collaborative Rain Hail Study spread nationwide, and to neighboring Canada and The Bahamas. A network of volunteer observers that started around Fort Collins Colorado has grown to over 16,000 reporting observers, submitting over 11,000 reports each day, 4 million reports each year, and the database has grown to over 40 million total precipitation reports, the largest of its kind ever built.

Celebrate! May ended quietly with zeros reported accompanied with a smash of reporting records. Rhode Island and Connecticut broke single month reporting records, and grouped together with Massachusetts, we smashed a single month reporting record of our own.

Celebrate! We have observers who made the Grand List. Those that signed up 3 years ago are coming to their first 1000 Daily Reports. We look forward to seeing more on the Grand List in the months to come.

Celebrate! Our anniversary series concludes with a look at Connecticut. We started this celebration 2 months ago with Rhode Island, last month with Massachusetts and conclude with Connecticut.

We are celebrating! Let's get into it.

The “Grand” List

Congratulations to all of these observers from our three states who have recently passed a milestone of 1000 Daily Reports.

3000 Daily Reports

MA-BR-2 Rehoboth 2.1 N

1000 Daily Reports

MA-SF-10 Chelsea 0.8 N
CT-FR-25 Norwalk 2.9 NNW
MA-BA-45 Sandwich 0.9 NNE
MA-WR-30 Shrewsbury 1.6 NNE
MA-BR-19 Somerset 2.0 NNE
MA-MD-52 Lexington 0.6 SW

Rain or Snow at Obs Time

An occurrence that doesn't happen that often. About 2 times a month, we go to take our morning observation (obs) and it is raining or snowing at that time. What's the best practice to report it?

The National Weather Service has a tool that will take in your Daily Reports. We have seen the results of that tool when they create a Public Information Statement (PNS) and place that Statement on the office website. We have seen those Statements in the past, most times for an overnight precip event, the long list by County and amount and "COCORAHS" stated.

The same tool can create Statements that spans multiple days, such as what occurs on those 2 times a month when it is actively raining/snowing during your morning observation.

One key requirement, however. You need to submit Daily Reports for ***both*** observations. One for the Daily Report for the time that it was raining/snowing, and another Daily Report for the next day, reporting the additional amount that fell after the initial observation.

Having only 1 Daily Report submitted, does stand out like a sore thumb, an inaccurate total, actually, an incomplete total.

Checklist

- ✓ *Be safe.* None of this is worth getting hurt for. If you need to, wait until the ice melts, wind subsides, or the lightning bolts stop.
- ✓ *Change your observation time* to if you do elect to wait out the weather or get an early start before conditions worsen. Be accurate, reporting the time that you measure when it is raining/snowing at observation time.
- ✓ *Make **both** Daily Reports. **Do not miss a day.*** The National Weather Service is taking in your reports, and they would like to be able to create a storm total from your reports.
- ✓ *Comments that verify and clarify your reported precipitation, helps the rest of know that your report is indeed accurate.* And typing "rain (snow) at obs time", will enable you to count how many times this does occur. Twice a month? You can tell.

Multi-Day Reporting

After going through May's reporting, and seeing the calendar ahead of us, the 4th of July coming on a Wednesday, take this time to mention some finer points of Multi-Day Reporting.

- ✓ Start the Multi-Day Report for the next day. Last Daily Report on July 3rd. First day of the Multi-Day Report is July 4th.
- ✓ Resume Daily Reporting the next day. Last Day of the Multi-Day report is dated July 8th. The next Daily Report is dated July 9th.
- ✓ Have every day accounted for. Check your reports with the "[Station Precip Summary](#)" link.
- ✓ Ask a Coordinator for help or for a 2nd set of eyes.

We Dare to Compare

We strive to have an observer in every town. We strive to have more observers than the year before. As we go along that path, we look at our own group of observers, look at the reporting and ... we dare to compare.

New York has been a state we have looked at in the past. As we grow, we see New York take another jump. In 2016, an increase in Long Island. In 2017, increases in the Buffalo and Albany area. In October 2017, we looked at New York and saw...

	Southern New England	New York
Observers Reporting	332	377
Precip Reports	8,016	9,439
Zero Reports	4,664	5,007
Non-Zero Reports	3,352	4,432

Reporting takes a downturn in the winter time. As we come out of winter, start recruiting in March and April, reporting picks up in April, and then again in May, we saw that our reporting and New York's was very close. Really close. The table on the next page to shows the results for May 2018.

	Southern New England	New York	Georgia
Observers Reporting	348	355	371
Reported all 31 days	177	144	140
Completed by Multi-Day	66	44	49
Missing 1 or 2 reports	17	48	54
Reports / Reporting Observer	25.1	24.5	23.4
Precip Reports	8,729	8,713	8,688
Zero Reports	4,659	4,420	4,248
Non-Zero Reports	4,070	4,293	4,440
Comments	1,449	1,675	775
Multi-Day Reports	205	183	198
Condition Monitoring	28	28	21
Significant Weather	11	11	18
Hail Reports	3	4	1
Snow Fall Reports	4,592	4,114	3,318
Snow Depth Reports	2,383	1,220	159

One key is within Recruiting. Since November, we were able to signup more observers than New York (132 to 90) and get more of them to report (62 to 36), to offset what are normal expected losses.

The next key is you! You place an emphasis on reporting, reporting zeros, and not missing reports. Less than 10% of the observers missed 1 or 2 reports. This is a remarkable achievement, surpassing the reporting totals of a larger state, with fewer reporting observers.

Wow! What an extraordinary effort by many!

Thank you.

Anniversary Celebration

As our network celebrates 20 years on June 17, you will probably see some dizzying statistics about months and years of service and total reports, somewhere on a “Message of the Day”. Observers from Colorado and New Mexico and Wyoming with 15 to 20 years of service and over 5000, 6000, and a few over 7000 Daily Reports. If it all looks like something that you would see or read in this Monthly Newsletter, you might be right about where all those statistics came from. This section is my anniversary message to you.

A special anniversary thanks to the observers who have been in our network for 10 years, RI-WS-1, RI-KN-2, RI-NW-4, RI-NW-5. You were the first to join in New England, and as the surrounding states filled in, day by day, you stuck with it. You defined the flooding rains, deep snows, droughts, and storms of all sizes and names. Your 3000+ Daily Reports will help define our climate. A Significant Weather Report from RI-WS-1 on a Wednesday afternoon in July 2008 convinced a Forecast Office and is still looked at and mentioned this year.

To any observer who ever reported “zero”, thank you. You have performed the most counterintuitive aspect of our network. We recruit volunteers to report precipitation and then we ask those same volunteers to report zeros when there is nothing to measure. You are the heroes of CoCoRaHS. There is a high value of you stating “no precipitation” or “no new snow” or “no snow depth” here, and you do that with every zero reported.

To those that make Significant Weather and Hail Reports, thank you. Those reports serve as an immediate real-time call to see what is happening now, proving or disproving what all the high-tech equipment says, and potentially saving life and property.

To the unique group of observers that are called “The Rulers of the Snow”, thank you. You do something that no machine or automated piece of equipment could possibly do. With measurements of snow depth and its water equivalent, satellites or overflying aircraft can’t completely tell what you tell, and many listen to what your measurements of snow, and its water equivalent, say.

To those that make well written Comments, thank you. Those Comments that clarify and verify in words what occurred when the rest of us are surprised at or interested to learn more about the amount reported.

To those that submit Condition Monitoring Reports, thank you. A new dimension to our participation, we help define where conditions are wet, dry or just normal, while putting every aspect of the ground into our statements of ground truth. A weekly statement that is made across our continent about drought conditions does take your input into consideration.

To this group of 348 reporting observers, thank you. You submitted more Daily Reports than our larger and neighboring state to the west, the State of New York, that had 7 more reporting observers... including the observer on Fishers Island! More Daily Reports than the State of Georgia with 23 more reporting observers. These past two weeks have been special, watching the reporting grow, seeing new observers start, and watching some of you fill in a missing report here and there. The margin was not that large, so every report mattered in the end. You did something extraordinary, surpassing the reporting totals of a larger state. You did so by reporting zeros, by looking at your own station reporting, and by filling in a missing report where needed.

348 observers who have submitted over 304,000 Daily Reports, with an average of 3 years participating in the network. But who's counting?

Congratulations! Celebrate!

Storms of May 15, 2018

FROM STORM PREDICTION CENTER

The Storm Prediction Center in Norman Oklahoma (<http://www.spc.noaa.gov/>) does provide outlooks for possible severe weather, every day.

In the days leading up to May 15, they were well aware of the potential for widespread severe weather in the Northeast. Watches were issued early in the afternoon prior to storm development. Warnings for impending severe weather were issued by NWS offices more than 30 minutes on average before the storms struck.

Updated Confirmed Tornadoes – May 15, 2018

Tornado Rating	Path Length	Track	Counties
EF-2	1.14 miles	Kent NY	Putnam NY
EF-1	9.5 miles	Beacon Falls CT to Hamden CT	New Haven CT
EF-1	About 5 miles	East of Woodstock NY to southern part of Saugerties NY to Tivoli NY	Ulster & Dutchess NY
EF-1	4.2 miles	Southbury CT to Oxford CT	New Haven CT
EF-1	0.7 mile	Winsted CT	Litchfield CT
EF-1	0.21 mile	Canaan Township PA - 2 miles east of Waymart PA to 2 miles west of Prompton PA	Wayne PA
EF-1	0.1 mile	Near Patterson NY	Putnam NY
EF-0	0.62 mile	Newburgh NY	Orange NY
EF-U	N/A	Video of tornado over Barkhamsted Reservoir No actual damage found	Litchfield CT

Watching storms on radar is one thing most of us like to do, as weather enthusiasts. Unfortunately, there were two fatalities that day. We've included a list of the eight confirmed tornadoes and significant damage reports from NWS storm surveys.

Macroburst/Microburst/Downburst Events – May 15, 2018				
Event Type	Wind Speeds	Damage Swath	Location	Counties
Microburst	115 mph	1 mile wide 6 miles long	1 mile southwest of Calkins PA to 3 miles south-southeast of Milanville PA	Wayne PA
Macroburst	110 mph	3 mi wide 9 mi long	New Fairfield to Brookfield CT	Fairfield CT
Microburst	110 mph	1.25 miles wide 8 miles long	Waymart PA to Honesdale PA	Wayne PA
Macroburst	85-105 mph	3 mi wide 8 mi long	Between Beacon/Wappingers Falls NY and East Fishkill/Hopewell Junction NY	Dutchess NY
Multiple Downbursts	90-100 mph	Across a wide area	Central Elk Co. especially south and east of St. Mary's to near Driftwood and into northern Clinton Co.	Elk, Cameron, and Clinton PA
Downburst	95 mph	Around 16 miles long	Narrowsburg NY to Eldred NY to Forestburgh NY	Sullivan NY

Macroburst/Microburst/Downburst Events – May 15, 2018				
Event Type	Wind Speeds	Damage Swath	Location	Counties
Downburst	80-100 mph	1.25 mi wide 9.3 mi long	Wingett Run OH to New Matamoras OH	Washington OH
Microburst	85-95 mph	Localized	East of Mount Holly Springs PA	Cumberland PA
Macroburst	80-90 mph	3 mi wide 4 mi long	Terry Hill area near Kent NY	Putnam NY
Microburst	80 mph	0.5 mile	Near North Salem NY	Westchester NY
Microburst	75-85 mph	N/A	Near Marysville PA	Perry PA
Straight Line Winds	70-90 mph	N/A	Orangeville PA	Columbia PA
Straight Line Winds	70-90 mph	N/A	Danville and Riverside PA	Northumberland & Montour PA
Straight Line Winds	65-75 mph	N/A	Mount Holly Springs PA to near Boiling Springs PA and Carlisle PA	Cumberland PA

FROM NWS EASTERN REGION

It's different when the storm damages a home that you've been in, someone you know.

Several of our observers in Connecticut were directly affected by these storms, either by tree damage or power outages that lasted for a few days.

Listed on the next 6 pages are some of the Significant Weather Reports and Hail Reports submitted by you to our NWS offices. Lat/Long redacted by the Editor. All of these reports, whether severe or not, greatly assist the forecasters by providing them with instant reports of what's happening at ground level, something that radar cannot do!

Please continue to send these real-time reports, as long as it safe to do so!

DAMAGE IN NORTHERN BROOKFIELD CT

Leading off this series of reports. Submitted on 4:21pm.

Detail and Summary for May 2018

From the National Weather Service (NWS) Climate sites for May 2018.

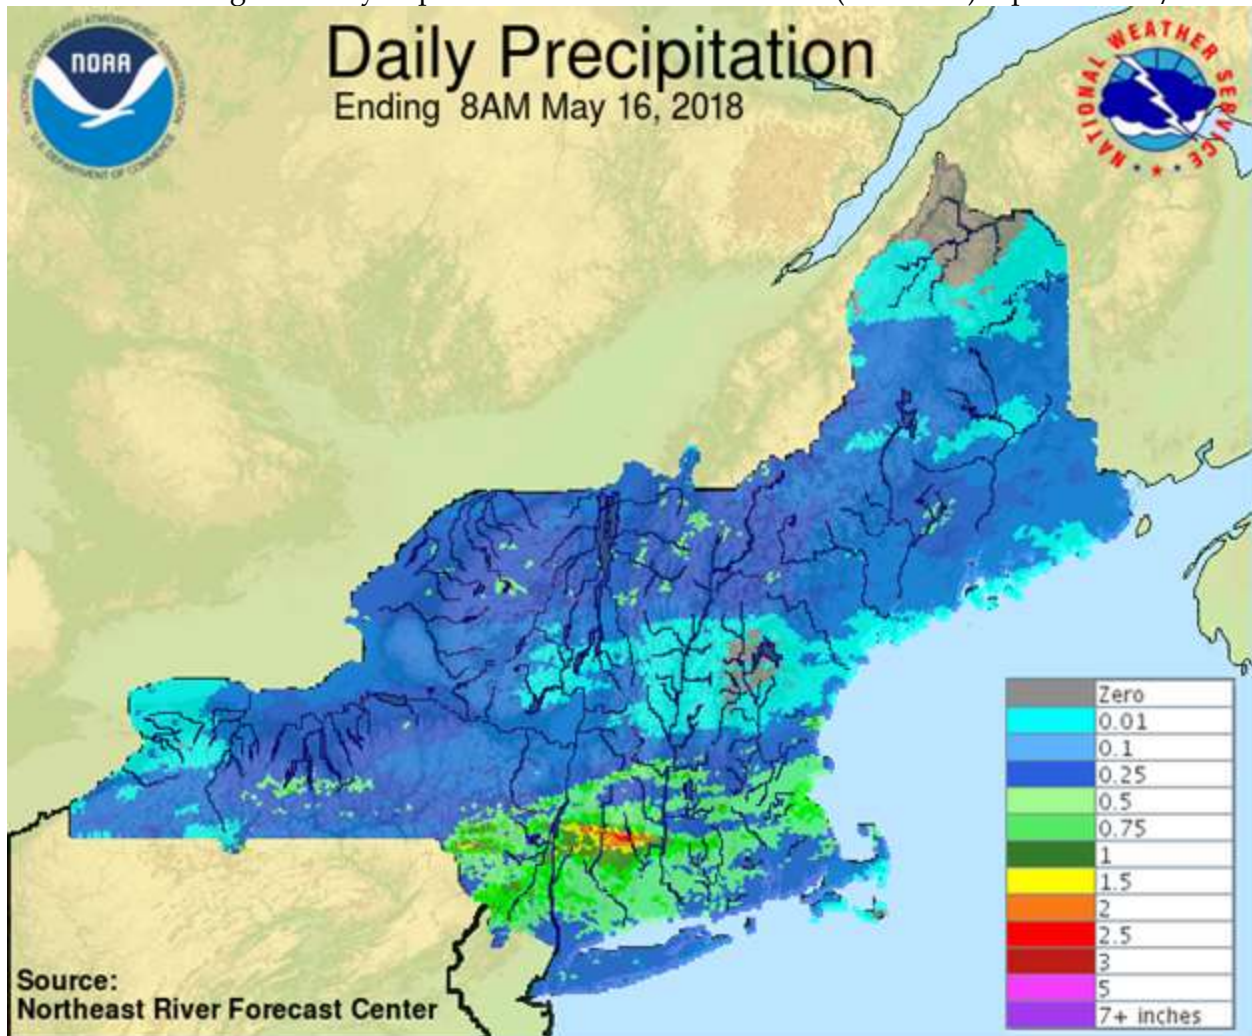

The red ink is back for May. Zeros ruled the month. Spring rains came during the first two weeks of the month, with light rains on the 3rd and the 6th. Our first thunderstorm on the 10th. Rain on the 12th. Significant wind event on the 15th, with a few small tornadoes in CT. A narrow band of 2" precip noted by the map on the next page. Over 1.5" rain in the southern half with three rains that week, on the 15th, 16th and 19th. Rain heaviest around New London on the 22nd. Memorial Day weekend was cloudy, cool, rain to the northeast of our area. The month ended quietly with zeros reported, but noisily with records being broken!

Take in this next section of your reports with appreciation of your efforts.

From your reports for May 2018

Observers reporting	348
Reported all 31 days	177
Completed by Multi-Day Reports	66
Missing 1 or 2 reports	17
Daily Reports	8729
Zero Reports	4659
Non-Zero Reports	4070
Daily Comments	1449
Multi-Day Reports	205
Condition Monitoring Reports	28
Significant Weather Reports	11
Hail Reports	3
Snowfall Reports	4592
Snow Depth Reports	2383
Highest Daily Report	2.05" from Colebrook CT (CT-LT-15) reported on 5/16

Astounding! Thank you filling in missing reports. With a collaborative effort, enjoy the variability that is within this record list of 243 stations, that covers nearly 7 pages.

Keep up the great work. Focus on not missing reports. Keep checking “Station Precip Summary” and continue to do so for many months to come.

For a viewing explanation on Watersheds, the CoCoRaHS animated video is on [YouTube](#).

“We do not live at the airport”

This month, especially. Look at the Massachusetts airports. See them? Count 13 airports, 12 with totals less than 2”.

How about your reported totals? 91 of 125 from Massachusetts are **MORE** than 2”, only 34 **less** than 2”.

Our network does not use automated gauges. And we do not live at the airport!

May 2018 as a calendar. A count of your Daily Reports by Date. Magenta colors are for the highest counts. Lime green color for the lowest counts.

Our average was a record 282 Daily Reports per day, another single month record. 317 Reports, after the storm, and 300 Daily Reports the day after. It appears that Saturdays are our low point for reporting in the week. A strong number of zeros to close out the month.

May 2018

Sun	Mon	Tue	Wed	Thu	Fri	Sat
		1 291	2 286	3 289	4 287	5 268

20 293	21 286	22 286	23 299	24 288	25 279	26 265
27 271	28 276	29 271	30 287	31 287		

From the Drought Monitor.

Did anyone get the normal 4” of precip in May? Did everyone get a single day amount of more than 1”? D0 is creeping further into our area. Your reports of zero define how dry it can get. Your Condition Monitoring Reports matter and should state what impacts from precipitation you are experiencing.

Every drop counts and zeros do too!

U.S. Drought Monitor Northeast RFC

Happy Anniversary, Connecticut!

July 1, 2009. Connecticut is admitted to CoCoRaHS, the 45th state to join the network.

Connecticut CoCoRaHS

Comments by Matt Spies – Connecticut State Coordinator

Cold. Dark. Blowing horizontal. We still go outside and make an observation. We believe that precipitation is important and highly variable.

We come inside, fill in a form on a website and press “Submit”. That’s the end of it. Not entirely. The snow section went to nohrsc.noaa.gov, the precip information is available to the National Weather Service. The Condition Monitoring Report went to the droughtreporter.unl.edu. The Significant Weather Report and the Hail Report... we saw where those end up and how fast they get there. It only takes minutes to alert someone.

No days missed? At the end of the month, a statement is made to the State Government about the precipitation that fell in each of the 8 counties of CT. “Includes CoCoRaHS data” it says. Live in Middlesex County? ***It is*** CoCoRaHS data. There is no one else but you in Middlesex County, measuring and reporting precipitation.

Each day, the map comes alive with dots, and behind every dot is someone with a ruler or a gauge. A volunteer. A citizen-scientist. Someone who believes what we believe, that precipitation is important and highly variable.

“Over 100 reports today for Connecticut.” If you’re going to be told of a new single day reporting record, it’s special when it comes from Nolan, sitting across the table, looking at it on his mobile device. With every new signup, every dot on the map, every gap that’s filled in, our Founder is watching what you’re doing, too.

This concludes our state anniversary series. Thank you for your participation in our anniversary celebrating citizen-science program.

Wrap up

The soft Spring rains will become fewer and the thunderstorms will fire up. You've seen here where the Significant Weather Reports and Hail Reports go and how fast they get to their destinations within the National Weather Service

Be a hero. Report your zeros. The most counterintuitive part of our network is a big step towards building your own record of the climate. Continue being the group that leaps over the reporting of larger states by reporting the most zeros, and has few missing reports.

June 17th marks the 20th year of CoCoRaHS. Celebrate this and all of the other achievements made recently.

Summer begins with the summer solstice and that occurs this year on June 21st at 6:07am. This is the last month of increasing daylight. Starting in July, daylight begins to decrease.

Thank you for all that you do for CoCoRaHS, whether in the past, present and in the days to come.

Celebrate!
