

Community Collaborative Rain, Hail & Snow Network

Southern

New England

June 2019

The spring rains continued. The reports kept coming.

During the morning reporting of May 31st, at 7:24AM, one of three possible observers, CT-NH-57, MA-ES-25 or MA-ES-56 submitted our 10,000th report for the month of May. 10,000!!! Congratulations to all that helped us cross this huge milestone in reporting.

Single month reporting records broken for all three of our states. Rhode Island passes Delaware with reporting. We broke a single month record with Condition Monitoring Reports. A single day reporting record on May 29th of 354 Daily Reports. And we reported over 7,000 Daily Reports of non-zero precipitation as the spring rains stayed with us through May.

We start this issue with the Grand List. We have our 1st observer to cross 4000 Daily Reports submitted. On to Observer Tips, your reports, and Connecticut celebrates its 10th anniversary in the network.

Let's get into it.

The “Grand” List

Congratulations to all of these observers from our three states who have recently passed a milestone of 1000 Daily Reports.

4000 Daily Reports

RI-NW-4 Middletown 1.1 SW

1000 Daily Reports

CT-FR-32 Monroe 0.8 W
CT-LT-14 Watertown 0.5 S
CT-NL-18 Stonington 0.5 NNE
MA-NT-1 Nantucket 3.8 WNW
RI-WS-14 Kingston 5.5 W
MA-BA-43 Chatham 0.4 WSW
CT-FR-43 Bethel 0.5 E

Observer Tips

Dew on the Gauge As the spring rains transition to summer warmth, the morning observation has a different look to it. Clear skies, plenty of moisture, and dew on the gauge.

If you are new to the crew, be sure you know what to do about dew. Our rain gauge is a ***GREAT*** dew collector. If you are reporting precipitation, be certain it came from a passing cloud and be certain it came from the sky. Look for confirming cues of wet pavement or puddles. Dew has smaller droplets on the funnel. Rain has larger droplets on the funnel.

Liquid in the inner cylinder does not mean it came from the sky, especially small quantities of 0.02" or less. Liquid in the inner cylinder can come from condensation. Our coastal locations can collect moisture from fog.

We measure and report precipitation, what falls from the sky.

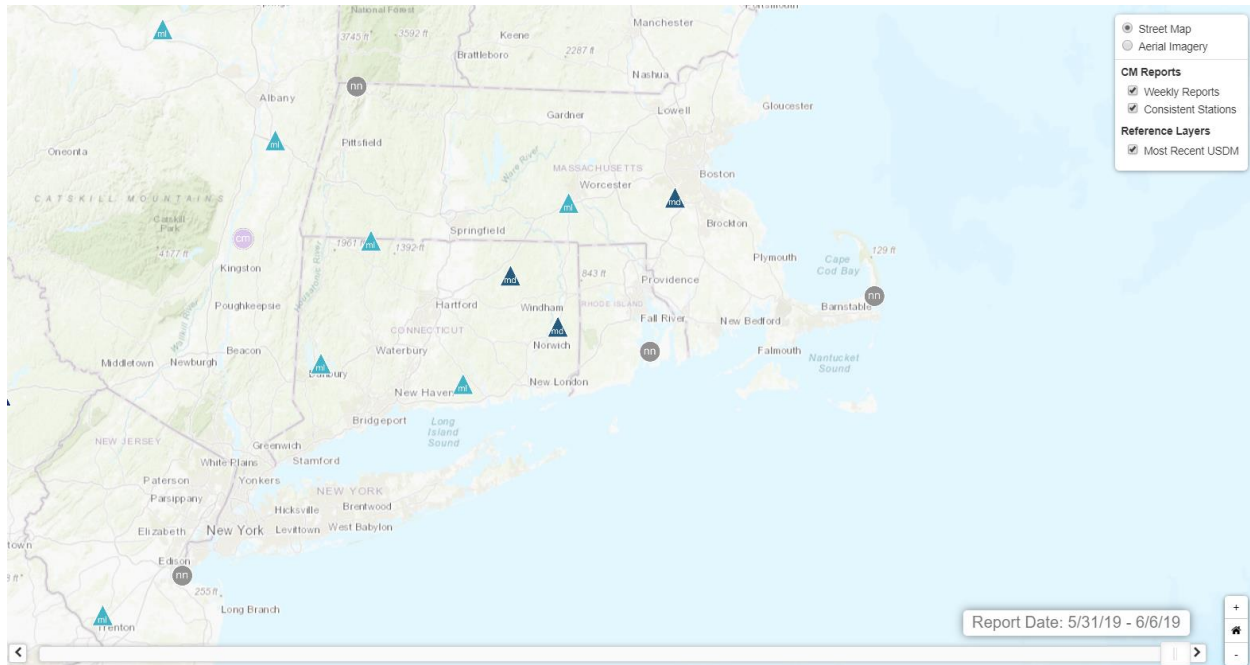

Dew on the gauge, during morning observation, can occur on half of the days in these upcoming months. ***HALF***. Make a Comment "Dew on the gauge" and count your comments with that phrase at the end of a month or longer during these warm weather months.

Significant Weather Reports: Off to a good start with the passing storms of early June. Our locale does well to report Significant Weather. Be safe. No dashing outside with winds howling and lightning bolts flashing. Wait until it is safe. Keep the rule of thumb in mind for a report submitting criteria: 1" of rain in 1 hour or less.

As we remember our network's 21st birthday this month, Significant Weather reporting and Hail Reporting goes back to how our network got its start.

Condition Monitoring Reports: Great to see a single month record broken of these reports in May. Keep up the reporting in the months to come. One report a week is all that we seek. Develop a reputation of being a Consistent Station.

Our current map of Condition Monitoring Reports

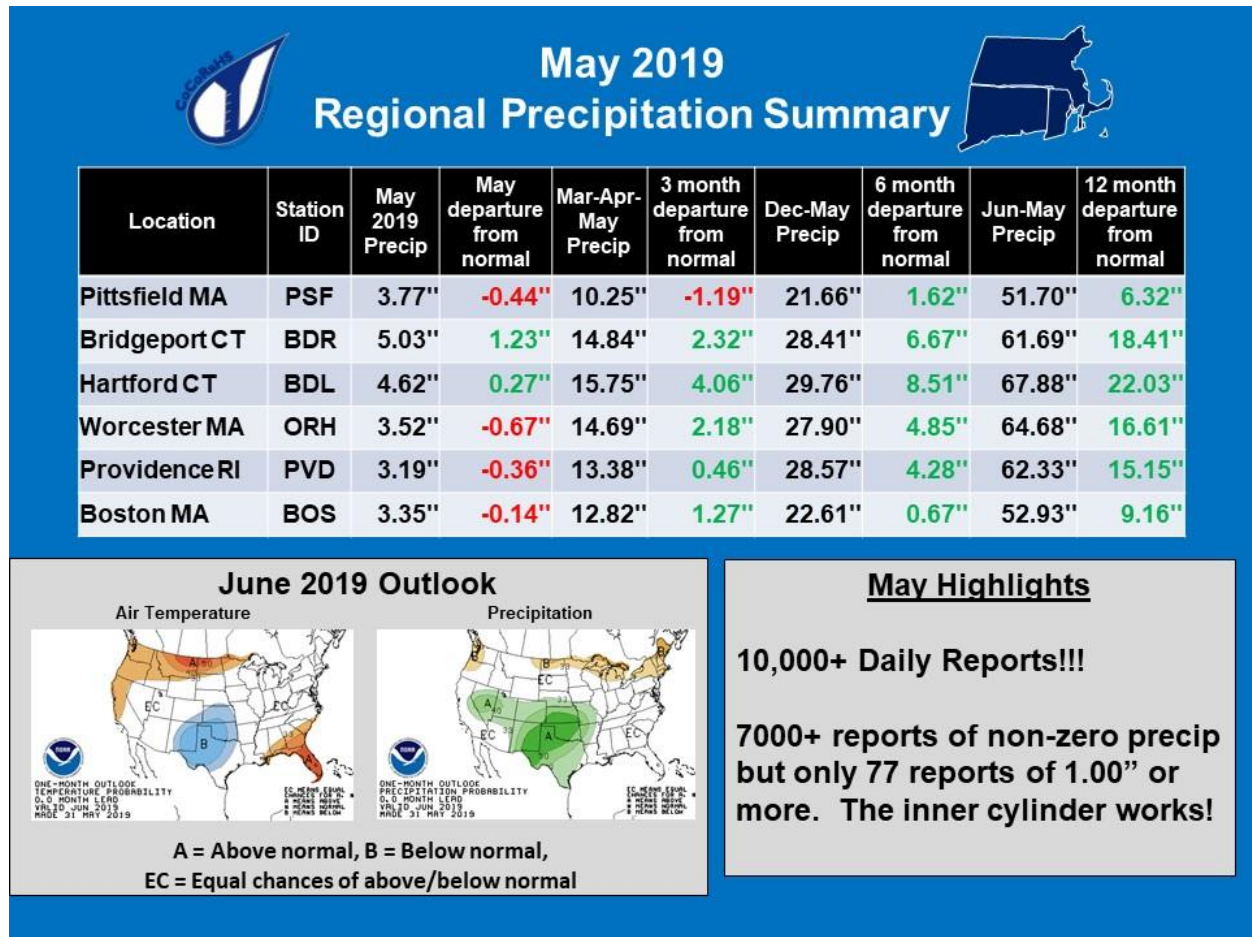

Comments: When the summer downpours come, one of your reports may stand out from the others. That time, above all other times, many of us are going to look for a Comment to see more about your reported amount.

Take the time and develop the habit of making a Comment with a report of precipitation. You can verify and clarify your reported value, add a narrative to the event, with your words.

Please make a Comment with reports of precipitation that verify and clarify your report.

Detail and Summary for May 2019

From the National Weather Service (NWS) Climate sites for May 2019.

The first week of May was overcast and rainy. Not until the 7th that the sun came out. Widespread rain on the 13th-14th. Memorial Day Weekend came with a small amount of rain on Saturday night. The main event, the deciding event why south and west CT received more precip than the rest of the area, was a local 2" of rain coming in the last week of May, noted by the map on the next page.

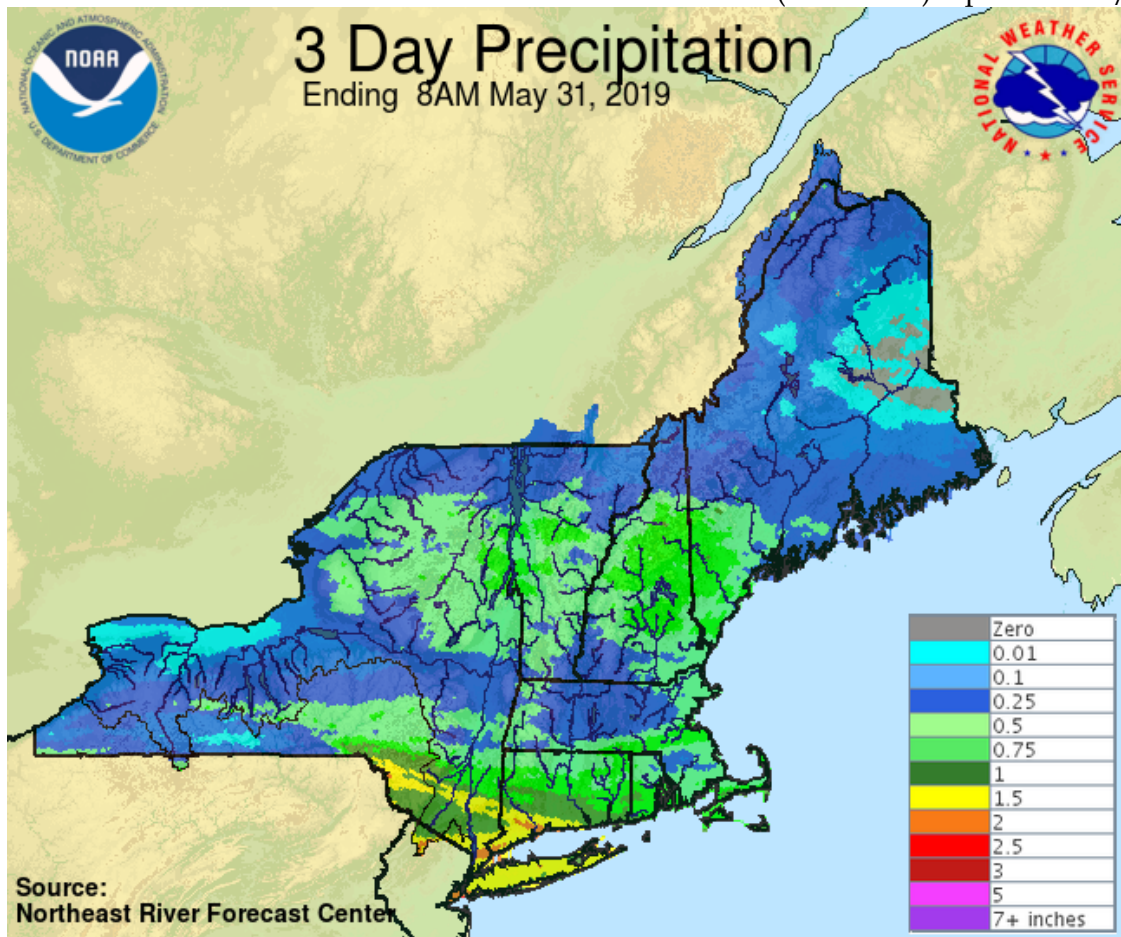

Plenty of small rains. 7000+ reports of precip, but only 77 reports of 1.00"

Rainy days outnumbered zero days, by a 2:1 margin. Two months in a row where rainy days dominated the month by a 2:1 margin.

Take in the next section with appreciation of your efforts.

From your reports for May 2019

Observers reporting	391
Reported all 31 days	184
Completed by Multi-Day Reports	62
Missing 1 or 2 reports	66
Daily Reports	10271 !!
Zero Reports	3262
Non-Zero Reports	7009
Daily Comments	1790
Multi-Day Reports	224
Condition Monitoring Reports	61
Significant Weather Reports	5
Hail Reports	0
Snowfall Reports	4345
Snow Depth Reports	2745
Highest Daily Report	1.39" in New Milford CT (CT-LT-22) reported on 5/29
	1.39" in Madison CT (CT-NH-41) reported on 5/13

A handful of stations had a multi-day report that spanned April 30. Those stations were excluded because we did not have precip reported for April 30. Another handful of stations because of reports of NA precip.

Check over your station's reports, with Station Precip Summary on the website, or the "History" function on the mobile app. Once you're in the habit of not missing reports, making this list becomes easier. Strive not to miss any days with either a Daily Report or a Multi-Day Report.

“We do not live at the airport”

One of the more uniform single months. Small rains. No snow. No big downpours. But do compare your station’s total to one of these nearby stations, and remember this...

... Our network does not use automated gauges. And we do not live at the airport!

Happy Anniversary, Connecticut!

July 1, 2009. Connecticut is admitted to CoCoRaHS, the 45th state to join the network.

Connecticut CoCoRaHS

Comments by Matt Spies – Connecticut State Coordinator

It starts with something small. A small gauge. A small measurement. A small number of observers. All in a small state.

Add in a few more dimensions. Snow fall. Snow depth. Water equivalent of snow. Comments. Significant Weather. Condition Monitoring. Hail.

Multiply it all by 20 observers, 40 observers, 80 observers, 120 observers. And then multiply it all by a month, or from when we started, 10 years.

And the something that started off small, turns large. The impact is far reaching. The dots on the map fill in. What starts as a measurement of precipitation turns into a definition of the climate, an understanding of the variability of precipitation, a way of monitoring our water resources, a real time alert of significant weather or of hailstones.

CoCoRaHS is Citizen Science at its finest, performed by volunteers of all ages and backgrounds, all throughout the year, through good weather and bad. From many, comes a mosaic of contributions, each day.

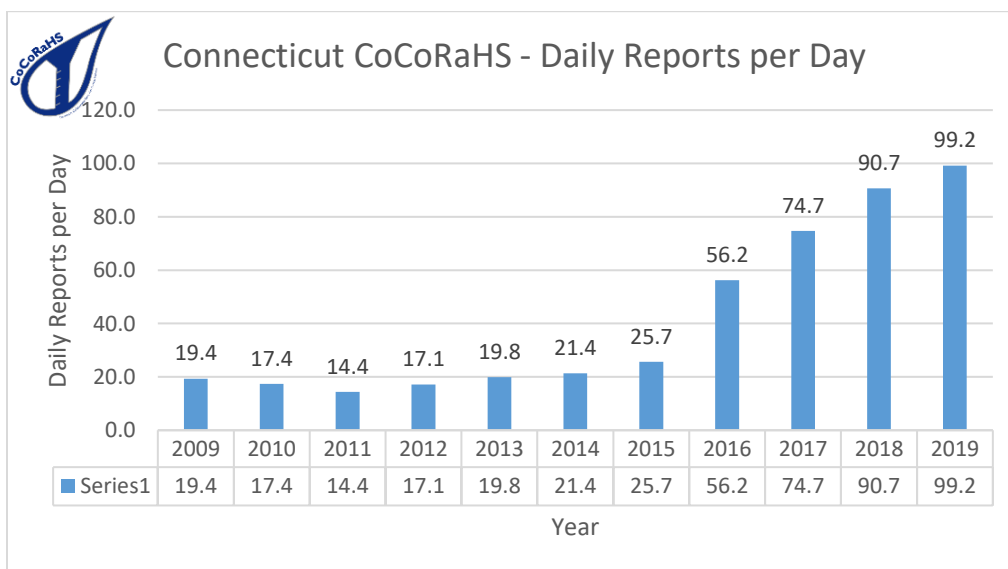

Whether you joined 10 days ago or when we started 10 years ago, thank you for being a part of our network, thank you for showing so many what our network can do and does every day. Low cost gauges and rulers have high value impacts. We monitor, measure and define a critically important resource: water.

In the State of Connecticut, don't miss any days, don't miss many days, and your station's totals become part of this report that finds its way to even more places, including the state government.

Fairfield	6.63	2.19	149	4.44
New Haven	7.64	3.27	175	4.37
Middlesex	7.62	3.20	172	4.42
New London	7.29	2.73	160	4.56

... and this table goes on and on with 2 months, 3 months, 6 months, 12 months, 24 months, 36 months.

Wrap up

Be a hero. Report your zeros. Be strong with your reporting when the rain does not come. Notice the change as we have come into June? The change shows in the reporting, so please submit your zeros, along with your precip reports, and strive not to miss any days.

Hurricane Season began on June 1. Inland flooding. Damaging winds. Long term power outages. Coastal flooding. Now is a good time to get into the habit of staying informed and to have a plan in place should a storm come our way this season.

Monday June 17th will mark the 21th year since CoCoRaHS started. This was typed before Nolan's newsletter came out, but Nolan's reminder is well noted.

Summer begins with the summer solstice and that occurs this year on June 21st at 11:54am EDT. Soak up the sunshine, the early sunrises and the late sunsets before we start to lose daylight in July.

Thank you for all that you do for CoCoRaHS, whether in the past, present and in the days to come.
