

Community Collaborative Rain, Hail & Snow Network

Southern

New England

October 2018

Rhode Island's State Tree is the Red Maple, one of the first trees to show its red buds in the spring, and to show its brilliant red colors in the fall.

Happy New Water Year. Welcome to all our new observers this month, as we continue to grow, and catch Nolan's attention along the way.

With more rain gauges than ever before, single month reporting records continue to fall. It only took another month, and only a 30-day month, to break our total daily reports record from last month, assisted by a single month reporting record from Massachusetts.

Within this month's Newsletter: We lead off with The Grand List Observers. Our "Observer of the Month" takes us to the highlands of western Hampshire County, Plainfield MA. If you want to participate in this "Observer of the Month" segment, please let us know. Take a look at two different gauges, time to start preparing and relearning about Snow Measuring and Reporting, Accuracy Matters, Multi-Day Reports, Water Year Summaries, and mobile device users are encouraged to use the app, mPING.

Let's get into it.

The “Grand” List

Congratulations to all of these observers from our three states who have recently passed a milestone of 1000 Daily Reports.

2000 Daily Reports

Observer of the Month – MA-HS-14

Summer 2018 in Plainfield MA: I'm drowning!

I reported 28 inches of rain, exactly, for the summer of 2018. In case you're wondrin' how that stacks up to normal, I will ask you what is normal? In any case, consider that I reported 10.7" last summer, and 9.87" the year before. The year before that, I had not even heard of CoCoRaHS, this month marking my third anniversary.

Consider this, also. On July 15th, I wrote: "It rained! This summer, that's close to a miracle. 0.4 inches of heavenly liquid. And now it's damp and cool heading towards steamy."

In the first month of summer, we received a mere 2.49 inches. Little did I know that a summer that started out concerningly dry would be marked by never-ending humidity: cool and humid, warm and humid, hot and humid. And rain, rain, rain. A summer of furniture molding at the base no matter what you did. A summer in which the streams got fuller and the grass greener as time went on rather than the other way around.

And it hasn't stopped yet. Since the summer passed, a mere ten days ago as of writing, I've reported another 3.01 inches. The basement is wet. We're drowning, it seems.

I am part of the CoCoRaHS network because I am a junkie for data, but also because it forces me to take the time to observe closely how much water is and is not coming to us. And water is everything.

The water cycle is a closed system. It rains, the water goes into the ground to feed the aquifer I use to wash my clothes and dog with – not to mention the beer that is made with it – but much of it runs off into the wetland

behind my house, where beavers work hard to make sure their dam contains it.

Much to their dismay, however, it doesn't and from there a stream turns into the north branch of the Swift River, which flows into the Westfield,

which in turn flows into the Connecticut, which in turn feeds Long Island Sound, which in turn... you get the picture.

And all along the way water evaporates. In winter, some of it sublimates directly from snow and ice into the air. Eventually a cloud appears overhead and it rains. Or hails. It's as inevitable as death and taxes – until one day it isn't.

And that's why a bog-obsessed intrepid dame of a certain age traipses out to the gauge on the fence every morning through rain and snow and sleet.

The post office creed could be readily adapted to CoCoRaHS observers: "Neither snow nor rain nor heat nor gloom of night stays these climate warriors from the swift completion of their appointed rounds!"

If you are interested in what I write about the water that flows on our hillside, check out some of my blog posts, [On the Value of Floating Garbage](#), [Where Does the White Go When the Snow Melts?](#), or [Sudden Onset Winter](#). Or some earlier ones, such as [On Ice Dams and Frost Heaves](#), and [Velcro ball bearings](#).

Keep on keeping on!

Respectfully submitted,
Pleun Bouricius aka "AgathaO"
Station MA-HS-14, Plainfield 2.4 ESE

One Gauge Measures “Up”

One Gauge Measures “Down”

EVAPOTRANSPIRATION GAUGE

AFTER THE RAINS FROM FLORENCE

MA-BR-23 (Attleboro MA) sent us pictures of both gauges that are measured and reported. The gauge to the left measures the “up” side of the water cycle, evapotranspiration, the potential loss of water, during the above freezing months. The gauge on the left we all know and love.

By making two measurements and two reports from these two gauges, we are able to determine water balance.

Consider how much water loss do we get during the warm weather months?

Questions? Please ask a Coordinator.

Snow Measuring and Reporting

A new snow reporting season is upon us. After looking over your Water Year Summaries, it was impressive to see stations at our higher elevations reporting for the season over 90" of snow and over 100 days with snow on the ground. It is that added dimension that your reporting can have.

New observers can look at this and say "Huh? I'm still learning how to get a handle on measuring and reporting rain." Maintaining a complete and accurate precipitation record is the most valuable element through the winter.

For those of you that have been participating for more than a year, pause and think, and consider adding snow fall reporting and snow depth reporting to all of your daily reports, for as many days as you safely and as accurately can.

Mobile app users: Time is now to get into the habit of pressing that "Click to specify snow & flooding info" link on the 1st screen of the reporting app.

Think about the tools that you need and the tools that you would like. More snow measuring boards? Tired of that tape measure? That plastic ruler doesn't go through ice? Want a 2nd outer cylinder? A weigh scale instead of using hot water to melt the snow? A PVC tube to cut snow cores? An inner tube stand for when you have more than 1" of liquid? You're under no obligation to spend more money. There are tools to buy and there are tools that can be made. Ask your Coordinator if you want more information.

There is a [snow guide](#) on our state pages. Please familiarize yourself with that document.

The most common occurrence in these next few months will probably be snow flurries. Snow flurries are reported as a "T", a trace for precipitation, the 1st value reported. And another "T", a trace for new snow, the 2nd value reported. **Two "T"'s** for snow flurries, a few flakes of snow, anything that does not accumulate to 0.1" of snow, which is a light dusting of snow.

Accuracy Matters

As the snow flurries fly, and turn to snow showers, and turn to snow storms, reporting mistakes multiply. Mistakes happen with reporting, not with measuring. Many others look at your reports. Quality checks, and your Coordinators may notify you when there is a question about your reported values.

As you enter your values, remember this: Accuracy Matters.

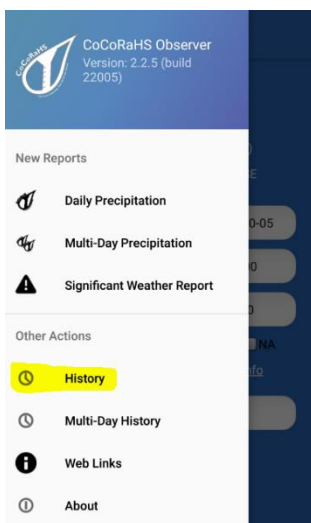

Look twice. Press Submit once. Look again to make sure the reported are accurate.

Reporting either with the website or the mobile app, you do have the ability to view AND change reported values.

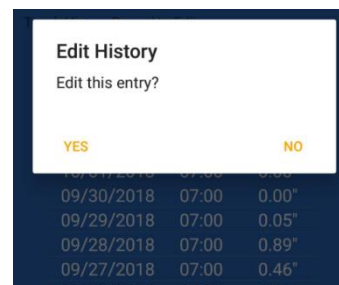

Website: Click on the pencil icon  , found either in this list of reports, after you submit your Daily Report. Or found, with “List/Edit My Reports” on the left side of website.

Mobile app. Pop up menu. History function.

DATE	TIME	PRECIP
10/05/2018	07:00	0.02"
10/04/2018	07:00	0.00"
10/03/2018	07:00	1.40"
10/02/2018	07:00	0.06"
10/01/2018	07:00	0.00"
09/30/2018	07:00	0.00"
09/29/2018	07:00	0.05"

Please be **accurate** with **all** of your reports.

Multi-Day Reports

When you need to take days off or are just unable to measure and report, Multi-Day Reports are a helpful feature to have. Different than the day to day use of Daily Reports, there are few points to keep in mind.

- ✓ Do NOT use a Daily Report for a Multi-Day accumulation. If you make this mistake...
 - Change the Daily Report to “NA”
 - Submit the Multi-Day Report
 - Notify your Coordinator, so that the Daily Report of “NA” can be deleted from the database.
- ✓ Enter the start and end dates correctly, leaving no gap in days.
- ✓ Check your reports with [Station Precip Summary](#)

The focus of Daily Reporting and Multi-Day Reporting should be having a complete record of reports for all days in a month, and longer.

Water Year Summaries

From the recent “Messages of the Day” a new Water Year begins, and summaries of the Water Year that has finished are available

Like a “Thank You” card from CoCoRaHS, do take the time to study your [Water Year Summary](#) and [others](#). Read your Comments. Look at your totals. Study your bar charts and line charts. Count the days where you reported more than 0.5”, 1”, and more. See all of the other totals, like the count of “Trace”, days of snow, days of snow cover.

What will you do the same or differently with your reporting going forward?

mPING – Real-Time Reporting with an app

GPS-enabled, mobile device users are encouraged to download the mPING app from the App store or Google Play. mPING – Meteorological Phenomena Identification Near the Ground. A real-time way to submit rain, snow, drizzle, dense fog in real time.

The National Severe Storms Laboratory (NSSL) along with the University of Oklahoma, are crowdsourcing reports of precipitation and other weather information to make weather radars and weather forecasts more accurate.

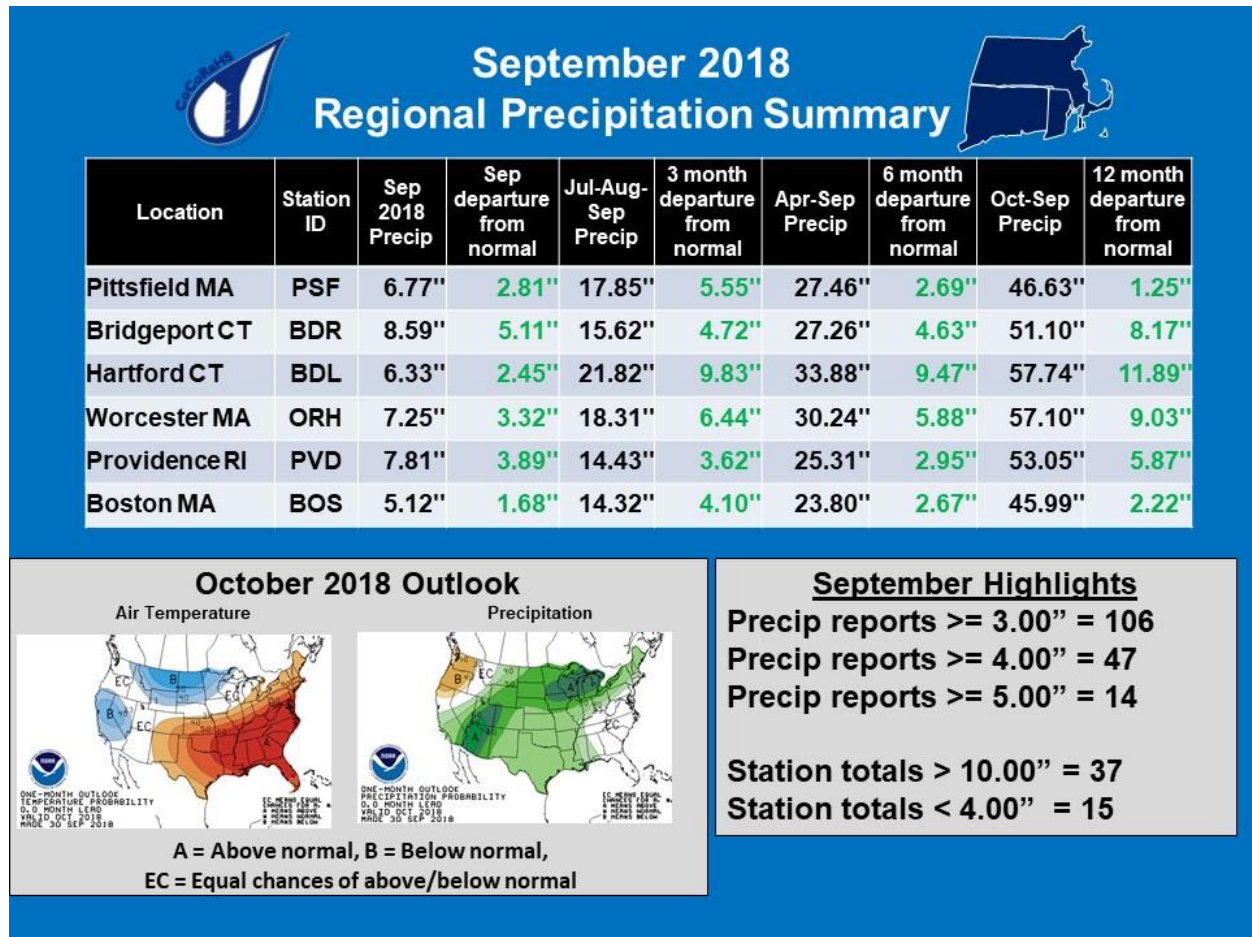

Citizen science does go beyond our fine network. There is an app that will become useful during the winter months. We live on the battle front of the rain-snow line. Your participation in real time about what type of precipitation is falling out of the sky, is welcome and is valuable.

The “Submit Report” button will become greyed out for a period of 30 seconds before any additional reports can be submitted. A loop of reports can be displayed with this [link](#).

Detail and Summary for September 2018

From the National Weather Service (NWS) Climate sites for Sep 2018.

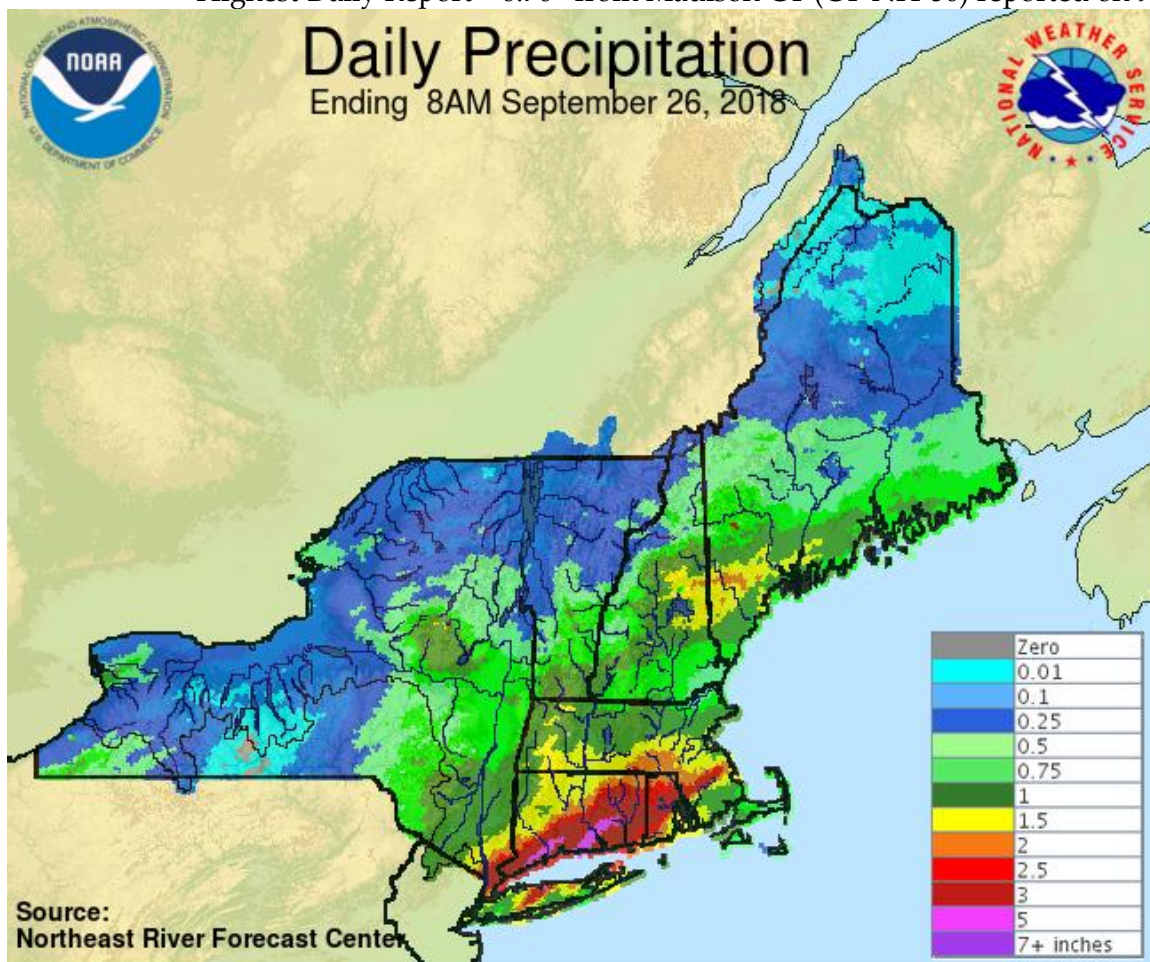

The start of September remained clear and warmest on Labor Day. First rain of the month reported on the 7th. Widespread 1" & 2" rains on the 10th for western and northern areas. 2" & 3" rains from the remnants of Hurricane Florence for the 18th – 19th, with 5" amounts reported from Townsend MA. Flooding rains reported on the 26th, noted on the map on the next page, with the highest amount, 6.70" reported from Madison CT.

Significant Weather Reports, and one Hail Report, are noted and appreciated.

Take in the next section with appreciation of your efforts.

From your reports for September 2018

Observers reporting	383
Reported all 30 days	190
Completed by Multi-Day Reports	55
Missing 1 or 2 reports	43
Daily Reports	9201
Zero Reports	4605
Non-Zero Reports	4596
Daily Comments	1715
Multi-Day Reports	205
Condition Monitoring Reports	56
Significant Weather Reports	53
Hail Reports	1
Snowfall Reports	4587
Snow Depth Reports	2244
Highest Daily Report	6.70" from Madison CT (CT-NH-50) reported on 9/26

We ended the Water Year with another long list. Thank you! 245 stations that covered all days in the month of September. Dozens of stations with more than 10" for the month. Take in the variability.

For a viewing explanation on Watersheds, the CoCoRaHS animated video is on [YouTube](#).

“We do not live at the airport”

Compare your monthly total. Compare your 12 month total, if you have one. See if you notice a difference. But do compare your station’s total to a nearby airport.

Our network does not use automated gauges. And we do not live at the airport!

September 2018 as a calendar. A count of your Daily Reports by Date. Magenta colors are for the highest counts. Lime green color for the lowest counts.

Our average was a record 307 Daily Reports per day. All of our states established single month records for Daily Reports per day.

Should it not rain as much or as often, keep the focus on reporting zeros.

For a viewing explanation on the Drought Monitor, the CoCoRaHS animated video is on [YouTube](#).

Wrap up

Our first frost normally occurs in October, marking the end of the growing season. Be ready to remove your funnel and inner cylinder should below freezing temperatures occur with liquid in the inner cylinder. Measure, write down and report your measurement at your regular time. When the warmer weather returns, so can your inner cylinder and funnel.

Do take in the changing colors throughout this month of October. Enjoy the beauty that makes New England unique. Take in the harvests of apples, grapes, and cranberries this month.

Daylight Saving time ends on November 4th. It will get dark early!

The first pass of our [Water Year Summaries](#) have appeared. Look over your reports and fill in any missing reports during this past Water Year.

Our November Newsletter will probably appear on November 8. On that same day is the next WxTalk Webinar titled, “**Building a Weather Ready Nation**”, from a staff member at the Boulder CO Forecast Office. If you cannot take in these Webinars live, they are available on [YouTube](#) for later viewing.

Snow can occur in October, so that is another reason to be ready to bring in your inner cylinder and funnel. We started the remarks on Snow Measuring & Reporting. We will continue those remarks in the months to come. There are plenty of videos on YouTube about measuring and reporting snow and we encourage you to view them, even as a refresher.

With more rain gauges than ever before, keep measuring and reporting as always before.

Thank you for all that you do for CoCoRaHS, whether in the past, present and in the days to come.
