Station Number : IL-CP-1
 Station Name : Homer 2.0 N

* Denotes Required Field

12/1/2015 *Observation Date
 7:00 AM *Observation Time

0.23 in. ← Rain and Melted Snow to the gauge during the past 24 hours

Observation Notes: (This will be available to the public)
 Very little wind - good gauge catch.

New Snowfall

2.6 in. Accumulation of new snow in inches to the nearest tenth
 0.25 in. Melted value from core to the nearest hundredth

Total Snow and Ice on Ground at Observation Time

2.5 in. Depth of total snow and ice (new and old) in inches to the nearest half inch
 NA in. Melted value from core to the nearest hundredth

Duration Information

Precipitation Began
 Precipitation Ended AM PM
 Heaviest Precipitation Began AM PM
 Heaviest Precipitation Lasted minutes

Reporting Snow and Sleet

The depth of snow and/or sleet that fell in the past 24 hours measured on your snow board or flat, level surface is entered here.

Melt the frozen precip in the gauge and report it here. If you cannot melt or do not have a measurement, change to NA. Do not leave it as zero. Do not enter your snowfall here.

Comments are always helpful.

This is the water measured from a core of snow taken from your snow board. If you do not take a separate core leave this NA. Do not copy your precip into this field.

This is the depth of snow and ice on the ground each day, whether or not any snow has fallen.

This is for the SWE of total on the ground, old plus new snow and ice.

For more instruction and detail on measuring and reporting snowfall, snow depth, and snow water equivalent (SWE) view the short training videos on the CoCoRaHS YouTube channel:
